

Lesson: Challenge 1

Challenge: Create a new project in the data panel for “Course 1 Week 2 Challenge”. Inside the project create a new file with some basic geometry. There is no specific geometry requirement. Once a new file has been created either share a public link with a download option or invite a user to collaborate on the project. Weekly challenges are ungraded and a chance for you to freely explore Fusion 360 within some loose requirements so use this as a change to get to know the software and expand on your current knowledge.

The following steps/items are required:

- New Project.
- Save a new design.
- Invite a user to collaborate or send a share public link.
